

City of Modesto v. Dow Chemical et al.

Jan Greben, Lead Attorney - Greben & Associates, John Lambie, Expert Witness

Underground pollution was found in water wells for a municipality, subsequently those pollutants were blamed on a variety of businesses, including our client, a dry cleaning chain. Using underground flow diagrams, archival microfiched records and animation, we were able to prove that our client was not responsible for the chemicals or the pollution.

Yellow Rock v. Sasol

Deborah Kutchler, McGready Richeson - Abbott Simses & Krutcher

A drilling company ran into pressure differentials down hole adjacent to a fault and one of the Louisiana Salt Domes. One of the Domes had been turned into a secure storage facility for petroleum reserves. The drilling company claimed that the Salt Dome storage well was leaking and causing the increased pressures which blew out the drilling string and closed the well. They sued for damages and total lifetime potential earnings. Using geologically accurate 3D animation, placing geographic features in scale to support expert testimony, the responsibility was removed from our client, the owners of the storage facility.

Duke Energy Field Services v. Union Pacific Resources (UPR)

Ann Weber, Senior Attorney for Duke Energy, John Lambie, Remediation Expert

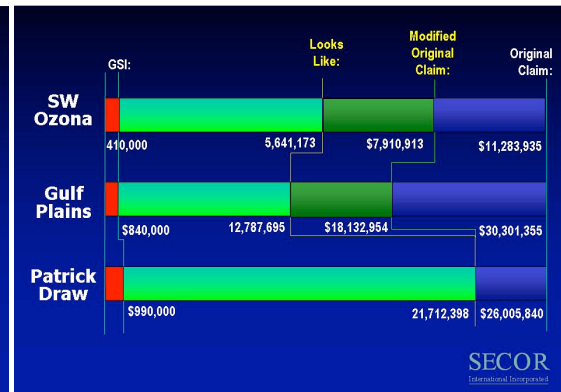

Duke purchased gas properties from UPR on a fast track, once the due diligence was complete, costs for correcting environmental problems surpassed the set aside amounts for corrections and Duke asked for additional consideration. UPR took an aggressive stance to refute the claims, using a hi-tech presentation to underscore its poorly researched opinions. Working with remediation experts, Doug formed a creative team and produced within 21 days a major rebuttal in cooperation with expert witnesses. Doug's team researched, designed, and produced graphics which explained scientific principles of underground pollution at 60 sites. The resulting show incorporated linked GPS data, Satellite imaging and 3D animation created specifically for the subject. Disagreement was resolved prior to filing.

State of Montana v. Arco

Robert Connery, Lead Attorney - Holland & Hart
During two years of pretrial work, including preparation for multiple hearings, Doug managed a technological adaptation at the Great Falls Federal Courtroom, assisted in production of expert exhibits including 30 minutes of animation animating trout life cycles in addition to collecting, compiling and contrasting 21 days of helicopter aerial video surveys of dozens of local rivers and streams. He built a GPS database and linked interactive demonstratives. Trial lasted three months.
